NARESH ARYAL

Full Stack Developer — React & Django

Balkot, Bhaktapur, Nepal | +977 9847221589 | aryalnaresh3@gmail.com

https://github.com/Naresharyal21 | https://www.linkedin.com/in/naresh-aryal-493989291

SUMMARY

Entry-level Full Stack Developer specializing in React and Django REST Framework, with hands-on experience across four end-to-end projects spanning frontend, backend, database, and IoT integration. Skilled in building component-driven interfaces and back-end systems in Python, from RESTful API design with JWT authentication to relational database modeling with the Django ORM. Focused on writing clean, maintainable code and eager to contribute to a collaborative engineering team.

SKILLS

Technical Skills

- Languages: **Python, JavaScript, PHP** *(also C, C++ — coursework: Data Structures & Algorithms)*
- Frontend: **React (Hooks, Router, Context API), JavaScript, HTML, CSS, Tailwind CSS, Vite**
- Backend: **Django, Django REST Framework, Django ORM, PHP, RESTful API design, JWT Authentication, Role-Based Access Control (RBAC)**
- Databases: **MySQL, SQLite, relational database modeling**
- Tools & Platforms: **Git, GitHub, Vercel, Visual Studio Code**

Soft Skills

- Problem Solving & Troubleshooting • Teamwork & Collaboration • Analytical & Critical Thinking • Communication

PROJECTS

Smart Waste Management Web App | React, Tailwind CSS, Django REST Framework, SQLite, IoT | Final-year project, Nepal College of Information Technology | 2025 – 2026

- Designed a role-based access system with four distinct roles (Admin, Employee, Driver, Supervisor); each role's dashboard restricts data and actions to permissions defined at the API level.
- Built a React and Tailwind CSS dashboard connected to Django REST Framework APIs; built with Vite and deployed to Vercel; version-controlled with Git and GitHub.
- Ingested telemetry from IoT ultrasonic bin sensors on a 10-second polling interval to display live fill-level status per bin.
- Wrote route optimization logic that sequences driver pickups by bin fill-level and location to reduce unnecessary stops.

Face Recognition Attendance System | React, CNN (Convolutional Neural Network) | Group Project (3 members), 6th Semester | Early 2025

- My contribution: built the entire React frontend — the live capture UI, admin dashboard, and attendance-results display — and integrated it with the team's CNN-based face recognition model via API calls.
- Validated the system on a sample dataset of 15 faces, achieving 60% recognition accuracy on this first-pass model — results that highlighted where more training data and model tuning were needed.

E-Commerce Web Application | React, Tailwind CSS | 5th Semester Project | Early–Mid 2024

- Built a full-stack e-commerce interface in React and Tailwind CSS, using Formik and Yup for form validation.
- Implemented a client-side authentication flow, managing JWT tokens and protected routes to gate access to authenticated views.
- Implemented client-side routing, state management, and persistent theming using React Router, Hooks, HOCs, and Local Storage.

Courier Service E-Commerce Website | HTML, CSS, PHP | 4th Semester Project | Early 2024

- Built a 3-page courier/parcel booking website (order placement, package measurement, and user account management) using HTML, CSS, and PHP.
- Implemented CRUD operations in PHP for order and user account data, including dynamic price calculation based on user-entered package measurements.
- Styled the site with custom external CSS.

EDUCATION

Bachelor of Engineering in Information Technology (BE IT) | 2022 – 2026

Nepal College of Information Technology, Balkumari, Lalitpur

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Python with Django — Code-it
- React JS — CREST Technology
- AWS Solutions Architect Associate — In Progress (expected completion: October 2026)

August 16, 2026

Dear Hiring Manager,

I am writing to apply for the React Developer position. I am a final-year Information Technology student at Nepal College of Information Technology (graduating 2026) with hands-on React experience across four full-stack projects, and I am eager to bring that foundation to your team.

On my final-year Smart Waste Management project, I built a React and Tailwind CSS dashboard connected to a Django REST Framework backend, using Vite for the build tooling and Vercel for deployment. The dashboard ingests live IoT telemetry from ultrasonic bin sensors on a 10-second polling interval and enforces a four-role, API-level permission system across Admin, Employee, Driver, and Supervisor views. On my E-Commerce Web Application project, I built the full React interface with Formik and Yup for form validation, a client-side JWT authentication flow with protected routes, and persistent theming using React Router, Hooks, HOCs, and Local Storage.

I also led the frontend on a group Face Recognition Attendance System, building the live capture UI, admin dashboard, and results display, and integrating it with my teammates' CNN-based recognition model via API calls. Alongside React, I am comfortable working across the stack: I have built RESTful APIs with Django REST Framework and JWT authentication, worked with MySQL and SQLite for relational data, and used Git and GitHub for version control throughout. I also completed a certification in React JS through CREST Technology.

I enjoy collaborating with cross-functional teams and take pride in writing clean, maintainable code, whether working independently or as part of a group. I am motivated to keep learning, currently working toward the AWS Solutions Architect Associate certification, and I would welcome the opportunity to grow with your team and take on more responsibility over time.

Thank you for considering my application. I have attached my resume for your review and would welcome the chance to discuss how I can contribute to your team.

Sincerely,

Naresh Aryal
